Conclusions and Recommendations

This site is located on an alluvial fan on the southwest side of the Clarkston Mountains, about 1 mile north of the Plymouth, Utah Exit on I-15. This site had been previously inspected in 2010, when operated by Nish Rock.

Examination of the material confirmed that the deposit to be mined was alluvial sand and gravels, and meets the criteria for "Exempt" status under the Utah Mined Land Reclamation Act. The Operator need only comply with local (County and/or City) Ordinances, and that should the pit develop to the extent that consolidated materials (i.e. bedrock) would be extracted, that they would need to submit a Notice of Intention with the Division and receive approval before continuing.
